IRON AGE

Genuine
New York Champion
Self-Dumping
Wood Hay Rakes

BATEMAN M'FG CO.,
GRENLOCH, N.J., U.S.A.

IRON AGE

EIGHTY-THREE
YEARS IN BUSINESS

Genuine N. Y. Champion Wood Hay Rakes (SELF-DUMPING)

ESPECIALLY suited to stand rough work on the rolling land of eastern territory—more so than the all-steel rakes which were so popular at one time.

The record of fifty years behind this rake is worth remembering. Originated by Wm. H. Patten and made by Patten & Stafford at Canastota, N. Y., as a specialty, they came to be regarded as the standard in their line—the reliable rake—always ready when needed—always up-to-date or ahead of its time.

Light, strong, compact, well put together, convenient, draws evenly, cleans the ground, gets all the hay that any rake can get.

The trade, dealer and consumer think very highly of this rake, especially in the North Atlantic and New England States, and no farmer is ever disappointed—he has an honest affection for this machine.

The sole right to manufacture is ours by purchase in 1908—and we make the genuine, in every respect.

Two styles are made—one with complete wood head; the other with wood head reinforced by angle steel.

Numbers and Sizes

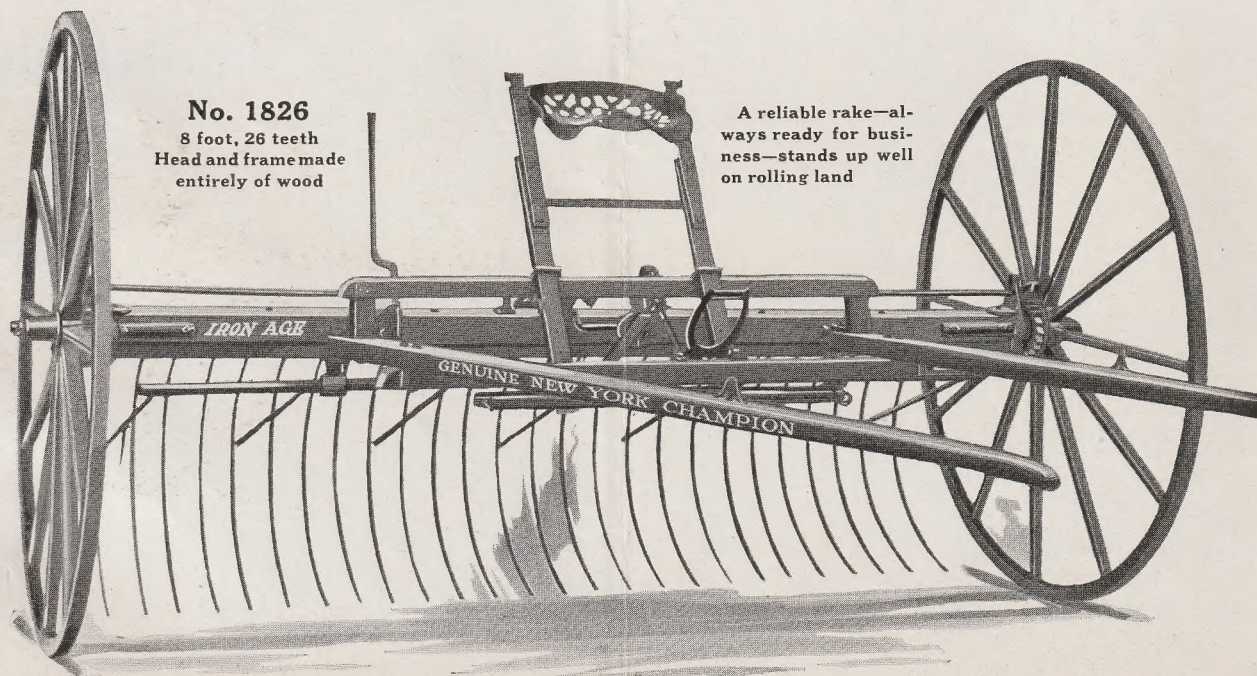

STYLE	WEIGHT	EQUIPMENT
No. 1820	299	8 foot 20 T., wood axle
No. 1826	310	8 foot 26 T., wood axle
No. 2922	334	9 foot 22 T., wood and steel
No. 2927	344	9 foot 27 T., wood and steel
No. 2024	347	10 foot 24 T., wood and steel
No. 2031	354	10 foot 31 T., wood and steel
Fig. 271		Parts to change thills to combination pole

If wanted with combination pole and thills (Fig. 271) add letter "C" to the number; if with steel wheels add letter "S" to the number.

Have Never Had One Brought Back

We have sold the New York Champion Hay Rake for 10 years. We let them out on trial—we have never had one brought back and have never had a dissatisfied customer. We have had customers come to us and say, "I have a New York Champion Rake, I have had it 20 years and I want another just like it." It is safe to say that over half of the farmers in our locality have a New York Champion Rake, and you can count on us for New York Champion customers.

LOVEJOY & MATHER,
Philadelphia, N. Y.

No. 1826

8 foot, 26 teeth
Head and frame made
entirely of wood

A reliable rake—always ready for business—stands up well on rolling land

BATEMAN M'FG CO.,

IRON AGE

EIGHTY-THREE
YEARS IN BUSINESS

Genuine N. Y. Champion Wood Hay Rakes (SELF-DUMPING)

WM. H. PATTEN
Originator and
Manufacturer for forty years

THAT these rakes are standard is shown by the heading—a genuine New York Champion means to many, many thousand farmers an old, familiar friend, the standard of all rakes—one that has never failed them in times of need. "This one thing I do," said Wm. H. Patten, originator and manufacturer for forty years or more—he applied himself to making the best rake—he was the son of a farmer, worked on a farm and knew what was needed to get all of the hay.

Farmers come to know this machine as a reliable rake; that it was always there in perfect condition, whenever it was wanted; that it cleaned the ground thoroughly without taking up dirt; that it wore well, worked with ease and convenience, in heavy or light crops, on level field or hillsides.

They knew Patten & Stafford were onto their job, which meant keeping up with modern conditions—improvements were made as fast as needed, the best

materials went into the rakes, and they always lived up to their name.

If a farmer sees a storm coming and has many acres of hay down, and is lucky enough to have a genuine N. Y. Champion, he doesn't find half the teeth broken, dumping device out of order, wheel ratchets worn, and a general "don't feel well myself" appearance.

The Bateman M'fg Co. have been making farm and garden machines for over 83 years and are certainly competent to continue the manufacture of the N. Y. Champions in their original form and the same high grade. They are the only ones making the original rake and will be glad to have your order and add another satisfied customer to their list.

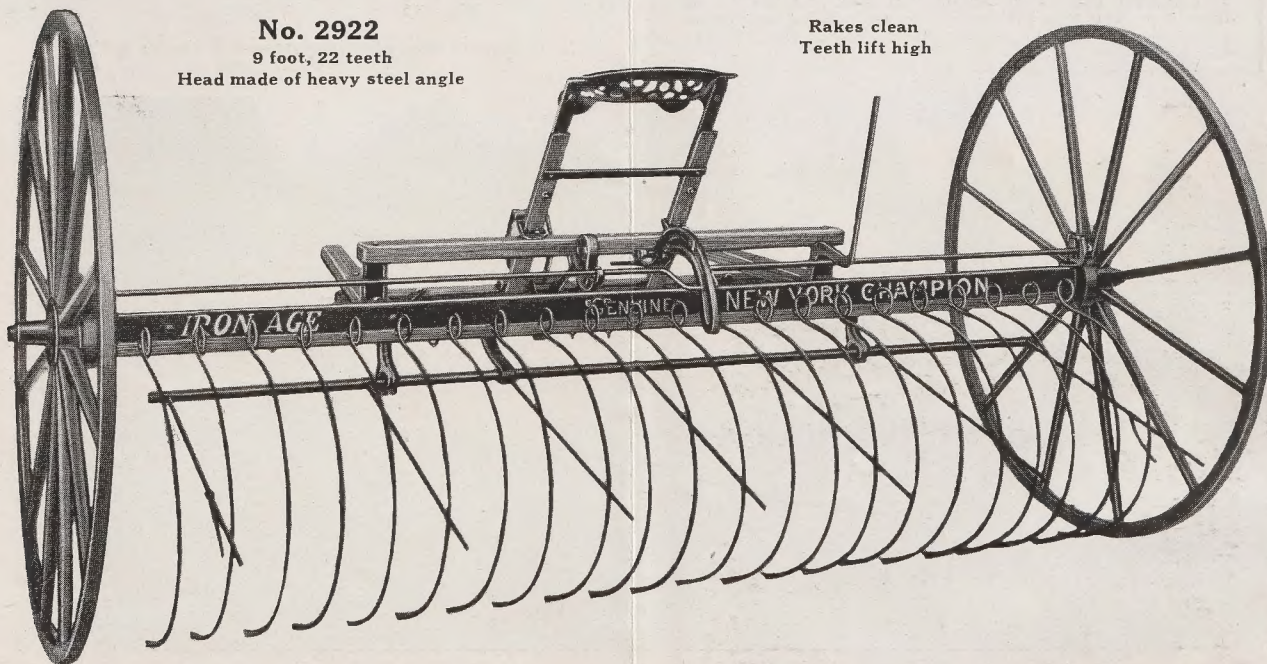

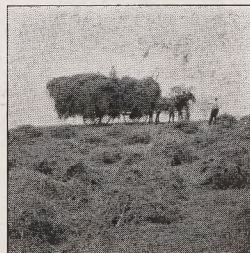

BATEMAN M'FG CO.,
Grenloch, New Jersey, U. S. A.

They Stay Sold

Edmeston, N. Y.

We regard New York Champion Hay Rakes as the best selling farm implements we have ever handled, for three reasons: First, they are widely known; second, they sell themselves; third, they stay sold.

C. W. HOPKINS' SON & CO.

No. 2922

9 foot, 22 teeth

Head made of heavy steel angle

Rakes clean
Teeth lift high

Genuine New York Champion Wood Hay Rakes

(SELF-DUMPING)

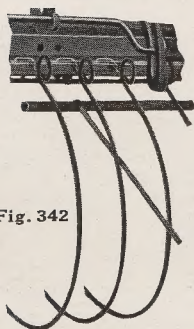

Fig. 342

FRAME. Wood throughout, except head, which is of wood on the No. 1 rakes and of steel angle on the No. 2 rakes. 9- and 10-foot rakes are trussed to prevent sagging in the center.

WHEELS. Wood wheels furnished unless otherwise ordered. Ratchets are separate and easily replaced when worn. 56 inches in diameter. Heavy 6-inch iron hubs.

SELF-DUMPING DEVICE. Consists of a foot lever which operates a one-rod ratchet to both wheels at once, making even draft and quick, easy dumping. Levers for either hand or foot give the driver control at all times.

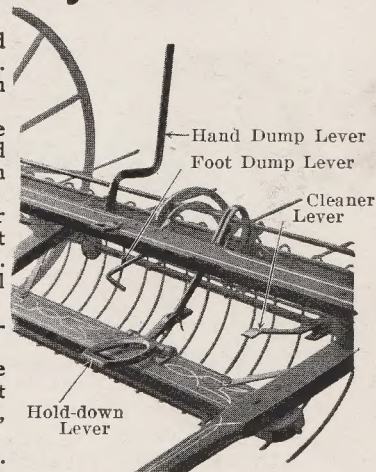

AXLES. Steel, $1\frac{1}{2}$ inches in diameter, 15 inches long, securely bolted to head. Very strong and rigid.

TEETH. Oil tempered. Coiled near upper end in such a way that you get the full value of the coil. They hang low, lift high when dumping, are not fastened tightly in their holders, but have free action. Do not break or bend, and are interchangeable. Teeth hook up out of the way when not in use.

SEAT. Comfortable steel seat with seat spring. Adjustable to height of driver.

CLEANERS. Steel, diamond-shaped, securely bolted to steel pipe. They pack the hay as the teeth fill and keep it from rolling. Foot lever on cleaner permits making larger windrows and bunching.

REPAIR PARTS—Patten & Stafford repair parts will be furnished by us for use on all the principal styles of New York Champion Rakes, as we have the original patterns.

COMBINATION POLE AND THILLS. Fig. 271

For two horses or one. Can be furnished for any "IRON AGE" New York Champion Rake. A practical combination. The solid parts in the cut show what is necessary to make the thills into combination pole, and the dotted lines show the way both are attached. Order new rakes equipped this way by adding letter "C" to the number, as No. 1820C.
